STAKEHOLDERS' SENTIMENT SURVEY 2022

Sentiment analysis will help HEIs gather insights from unorganized and unstructured data from online/offline sources such as emails, blog posts, support tickets, feedback-mechanism, survey-forms, web chat , opinion-poll, social media channels, forums and comments. It may involve the use of data mining, machine learning (ML), and artificial intelligence (AI) to extract emotions and subjective information from text. Rule-based systems perform sentiment analysis based on predefined vocabulary-based rules, while automated systems learn from data using machine learning techniques. Hybrid sentiment analysis combines both approaches.

For the purpose of detailed analysis of a particular HEI, this Stakeholder Sentiment Survey (SSS) may also consider Intent Analysis, Social Media Monitoring, Brand Monitoring, Customer Support Analytics, Customer Feedback Analysis, Market Research and more.

Sentiment analysis, also known as opinion mining, is a contextual textual exploration that identifies emotional tone behind textual content and extracts subjective information in a source document and helps Institution understand stakeholder sentiment towards its brand and services.

Stakeholders' Sentiment Survey is a rare and significant research-based ranking analysis, first-of-its-kind, directly dependent on the express-feedback of the stakeholders of the HEI, by R. World Institutional Ranking.
